

Yuliya

# Last Evaluation Score (1-5)	4.4
# Experience Level (1-7)	4
📅 Last Evaluation Date	@September 24, 2025
📅 Last Evaluation Period	@January 1, 2025 → September 30, 2025
🕒 Role	UX Designer
👤 Direct Manager	Ⓐ Alex Pietrak
🏢 Team	Product
🕒 Contractor Status	Engaged

January 2025 - Promoted
February 2004 -
MMMM YYYY - Promoted/Raise/Fired/Demoted/Contract extended

▼ MMMM YYYY - MMMM YYYY

Evaluation Period:
Person: Yuliya
Expert Level (1-7): 4
Direct Manager: Maria (collected data from Bharathi)

Responsibilities/Expectations for the current role:
Agreed on by between evaluated person, team lead and domain lead/founders.

- designing user interfaces
- creating wireframes and prototypes
- conducting user research
- defining user experience flows
- collaborating with stakeholders
- iterating on designs based on feedback
- ensuring design consistency
- working with developers on implementation
- testing usability
- refining designs post-launch
- speaking up and suggesting ideas, consulting on design questions
- providing design feedback
- estimating and scoping my work
- collaborating on project roadmap and planning
- leading my own projects, delivery plan creation, project scoping, etc.
- collaborate on improving design processes, etc.
- BDDs creation, creation of design documentation
- working with metrics and data analyses

Evaluated person populates yellow

Score	Descriptive Rating	How this maps on the outcomes
5	Exceptional	Accelerated Promotion
4	Exceeds Expectations	On track for promotion
3	Meets Expectations	Keeps the job
2	Needs Improvement	Conditionally keeps the job
1	Unsatisfactory	Fired

#	Section	Evaluation Question	Self-Rating (1-5)	Document What Happened	Improvement Goal for Next Evaluation Period	Maria - Rating (1-5)	Maria (consulted with other stakeholders)- feedback	Founders / Domain Lead Feedback
1	Value Creation	List all tangible deliverables (features, projects, etc.) you created since the last evaluation. How much time or other resources did each take. Provide a reflection on the impact each deliverable had on the organization.	3	1. Onboarding exp. Time: about 1-2 months Impact: about +10% onboarding completion improvement on desktop (not so impactful on mobile) + updated UI and look and feel + updated components and DS + ideas and plan for the next iterations 2. Sign up/sign in/registration flow. Time: 1-1.5 month Impact: conversion on registration page increased by appr. 8% from release (until april) + updated UI and look and feel + good quality design mockups + updated components 3. SMBs.	1. Even better scope and prioritize what's important and what's the most impactful VS what is less impactful and nice to have (given the time frame) 2. More autonomi and confidence in deciding, prioritizing, planning the projects I'm leading, so that in the end there is a clear structure, plan, and decisions that are made and backed up with data. 3. More experimentation and running tests, working closely with numbers and metrics.	3	Good: Growing awareness of impact of own work (noticeable improvement from last review). To improve: For 6 months more impact needs to be created. Maybe too much time got lost in onboarding or generally speed of design could improve. Improvements in registrations are not high enough for the time spent. I m not considering here the fact that many of the designs are not on prod (attributing this to slow speed of devs).	

#	Section	Evaluation Question	Self-Rating (1-5)	Document What Happened	Improvement Goal for Next Evaluation Period	Maria - Rating (1-5)	Maria (consulted with other stakeholders)- feedback	Founders / Domain Lead Feedback
				Time: appr. 0.5 month for planning, 1 month deliverable Impact: unknown yet, but potentially high impact project that covers all major flows for SMBs to be able to self-service. + modern UI and look and feel + good quality design mockups + detailed BDDs + backlog with ideas and scope for the next iteration 4. Discovery sprints (referrals, subscription and billing, recording) Time: 1 week for each topic Impact: discovered bugs, UX/UI issues that are mapped to the CS tickets and user feedback, more in-depth understanding about stronger/weaker areas of the product. Backlog filled with ideas. Dev tickets created. 5. Side-by-side recorder designs and usability testing Time: about 2-3 weeks Impact: flow that tested, iterated and verified with users; - modern and neat UI; - better discoverability of app features; - flow and UI that fit the needs of different users; 6. Telehealth modal improvements Fixing one of the confusing areas of the app that impacts the way how people can use the recorder. 7. Other smaller improvements: e.g. note in progress signifiers				
2	OKRs & Target Achievement	Explain how well your personal targets, team goals and company objectives were achieved or not in relationship to your contribution.	3	I think that projects I worked on and delivered are in line with the roadmap, and contributed to the OKRs set at the beginning of this year. I also contribute to tasks and projects that are addressing and solving users issues/struggles yet still having the business value. Not all projects were released (SMBs), so it's hard to measure the impact.	I want to better collaborate with PMs so that we can make sure that all of the findings from research and discovery sprints and estimated and planned properly, so that none of the discovery work done is lost. And in general, so that we keep track of all ideas, issues, so that none of that is lost.	3	Here main concern is the underperformance of the growth team as a whole (SMB not life, team has failed majorly on growing revenue, the surveys of early users did not result in any final learnings or improvements etc) Sth that would help: proactively trying to solve problems around getting more new users → drive research, make suggestions for experiments, push Bharathi to prioritize above other things etc	
3	Estimation & Deadlines	For each deliverable (initiatives not individual ticket), indicate whether it was completed on the agreed deadline.	4	I meet the estimations and deadlines (+/- several days). Any delays are happening due to the reasonable reasons and could be considered as objective risks/inability to fully scope and foresee everything at the beginning, etc. I think I also perform well in terms of managing and doing the job that usually takes significantly more time to do in the tighter deadlines.		3	Good: Estimation is not inaccurate To improve: general speed of work Consulted team members share the following feedback related to speed of work: - general notion of slow speed - noticable tendency to overthink - a concern regarding the amount of working hours and availability	
4	Core Role	How reliably do you manage your core responsibilities as outlined in your responsibilities (listed above this table)?	4	I think I'm reliable and perform well according to my role responsibilities, without the need to being controled and micro-managed. I think I'm can be reliable in terms of delivering the good work on time (or communicate when there are any obstacles, alignment needed, etc.). Also, sometimes I think I take some PMs responsibilities (planning, checks with the dev team, organizing some work, etc.).	Again, I think I could grow more in the direction of a person who can confidently lead the projects and organize the work around it. I think there is always a room for improvement in terms of the design skills as well. I want to work and understand numbers better as well.	3	Design work is done well in the scopes given. Definitely up to expectation for a senior or above even (good stakeholder management, extra tasks like BDDs etc) Improvement area (that makes it not above expectation as a total score): 1. Less talks, or shorter talks (alignments), better streamlined user research (on 1 day or max 2 not the whole week). 2. Getting results from surveys sent - if not enough users, be creative about how to solve that, to finish and collect results from the time invested (talking about onboarding related surveys from q1)	

#	Section	Evaluation Question	Self-Rating (1-5)	Document What Happened	Improvement Goal for Next Evaluation Period	Maria - Rating (1-5)	Maria (consulted with other stakeholders)- feedback	Founders / Domain Lead Feedback
5	Quality & Best Practices	For each deliverable, detail the number of iterations and feedback cycles required, including the review time needed from other team members and the number of reworks. List the best practices you followed as well as those that could have been applied more rigorously and those that you did not follow and why.	4	Iterations and receiving feedback is the normal part of any process, especially the design process. I always make sure to reach out for the feedback and welcome any feedback, and do an effort in order to make sure that everyone are aligned and informed about what i'm doing and why. Usually, it could take 1-3 iterations/feedback cycles (especially if some part of the product is complex or questionable). I usually do the desk research/benchmarking for the projects I'm working on, to make sure that my work is in line with best industry practices.		4	High quality designs, with BDDs and tickets. Above expectations! Small improvement area: Sometimes team members complain on "to much sticking to best practice" at the expense of speed and pragmatic choices.	
6	Initiative & Proactivity	Describe actions where you went above and beyond—learning new tools, streamlining processes, or supporting your team outside core duties. Include situations when you could have taken initiative but you did not. What was the impact, and what are your plans to continue driving improvement?	4	I feel that even though some processes are still not perfect, I collaborate with the team (especially the design team), and also suggesting my design opinion when I can or asked. I feel I also always try to create better designs, fix the existing UI/UX issues as I go or propose improvements even though it could be out of scope or make the scope larger.	Prioritize and evaluate these design initiatives better in terms of it's impact.	4	We notice a general initiative to streamline processes, improve things (e.g.the designer evaluation framework shared).	
7	Company Values	Reflect on how you have demonstrated the company's core values of Curiosity, Trust, Collaboration, and Care . Provide specific examples where these values were integral to your work and contributed to the organization's success, as well as situations when you did not demonstrate the values but you could have. Explain the blockers.	3	I think I'm quite active on the meetings, always ask questions, speak up my opinion if I have it, reach out to people if I need to collaborate. Also I do care about what I'm doing and which designs I'm creating. So, I think I'm in line with company values.		3	Generally in line, care demonstrated for the product, users, design quality. Improvement: There is general notion of starting late and ending early on some days which lowers trust in things getting done timely (we are yet to see an "extra push" to start early or stay up longer and deliver what is urgent and important). (Benchmarked to team members showing up on the weekend to make sure things committed are delivered on time).	

Expectations by the next review:

Seniority Scale:

Level	Review Dependency	Scope Ownership	Deadline Ownership	Collaboration & Leadership	Input Required	Value Creation Awareness
1	Needs full review and rework	Can follow instructions; cannot resolve ambiguity; handles only simple, isolated tasks	Needs close reminders and follow-up	Observes others; not yet a collaborator	Requires exact tasks, templates, and step-by-step guidance	Has no awareness of business value; focused solely on completing assigned tasks
2	Needs regular review	Can complete tasks with minimal ambiguity; contributes to pre-scoped projects	Usually meets deadlines with reminders; can't estimate scope yet	Starts contributing to small team rituals	Needs clearly scoped tasks and support for prioritization	Begins noticing the impact of their work; starts asking how their work connects to business goals
3	Final output needs review; fewer iterations	Solves well-scoped problems independently; owns tasks or simple features within a project	Tracks deadlines, communicates early; starts estimating own tasks	Participates in peer reviews, supports others occasionally	Requires goals and rough scoping, self-manages execution	Questions priorities if they don't seem valuable; gives feedback to improve impact
4	Light review or alignment check	Breaks down and leads medium-sized projects; scopes and owns features or initiatives	Proactively meets deadlines and estimates accurately for own work	Collaborates across disciplines, leads syncs	Requires objective and context; defines and scopes own work	Ensures what they and others work on creates measurable business value
5	High trust; strategic feedback only	Solves ambiguous problems; scopes and leads full projects across domains	Delivers consistently, estimates for self and others in planning	Mentors others, drives cross-functional work	Requires outcome and constraints; creates plans	Proactively identifies ways to unlock or scale business value
6	Only high-level strategic review	Identifies and defines domain-wide problems and opportunities; creates and leads roadmaps	Anticipates, scopes, and estimates timelines across multiple contributors	Leads multiple contributors across roles	Needs business priorities; shapes roadmap and goals	Shapes strategy to increase value across teams and product areas
7	No review unless aligned with exec vision	Discovers and frames org-level opportunities; drives long-term cross-domain strategy	Aligns, estimates, and adjusts timelines across teams and functions	Sets direction, coaches leaders, builds coalitions	Requires mission and KPIs; defines strategy and structure	Creates or redefines business models, priorities, or structures to unlock long-term value

Summary:

1. What works very well: design toolkit, proactivity, attention to details
2. What needs to improve: general notion of low speed
3. Target for next review, which will be important for possible raise:
 - a. demonstrate higher output/weeks spent
 - i. show up earlier (by 10 latest if the end of work is at 18 and breaks are taken for lunch or stay after 18 when starting early is not possible)
 - ii. try to speed up meetings - more executive level summary style of presentation (important points first, less over analyzing)

With those improvements on track for promotion
